

VIII. Mini Project – Food Delivery Analytics

AIM:

To analyze and visualize food delivery data using Python, Power BI, and Tableau, and to create simple visualizations that provide insights into orders, cuisine types, locations, payment methods, ratings, order values, and delivery time.

DOMAIN:

Food Delivery Analytics

PROBLEM STATEMENT:

With the increasing use of online food delivery services, organizations need to understand customer ordering patterns and delivery performance. There is a need for a data-driven visualization system to analyze food orders based on cuisine type, location, payment method, order status, ratings, order value, and delivery time.

The project aims to develop simple and interactive visualizations that help understand food ordering trends, popular cuisines, customer preferences, order values, and delivery performance using Python, Power BI, and Tableau.
